

RINVII ARGON

2 FUNZIONI 2 CONNETTORI

La tendenza degli ultimi anni è quella di creare dei set composti da due connettori con lo stesso corpo dimenticando che debbano svolgere funzioni ben diverse tra di loro: il primo, generalmente a leva dritta deve facilmente entrare, ruotare ed essere estratto dal punto di ancoraggio, il secondo deve permettere il facile inserimento della corda. KONG ha pertanto creato dei connettori specifici il cui abbinamento con fettucce di opportuna lunghezza e resistenza ha dato vita alla famiglia di rinvii ARGON.

SET ARGON KK

729
ARGON RK

Rinvio ultraleggero (solo 69g!) composto da due connettori con leva a filo. Ideale per chi cerca il massimo della leggerezza.

Il connettore Key Lock agevola il disinserimento dallo spit mentre il leva a filo favorisce l'inserimento della corda. Il perfetto compromesso tra leggerezza e funzionalità.

Sistema Key Lock su entrambi i connettori per evitare qualunque impiglio. Perfetto per chi cerca la praticità d'utilizzo.

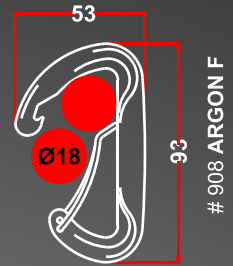

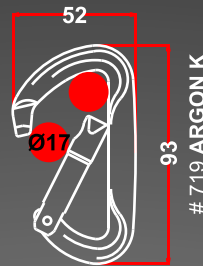

ARGON SET

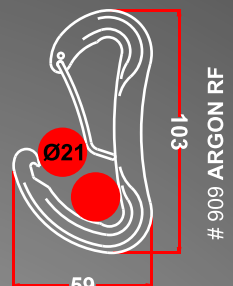

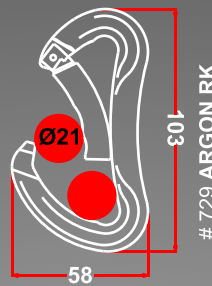

2 FUNCTIONS 2 CONNECTORS

Talking about quickdraws, the actual trend is to create sets fitted with two connectors with the same shape of the body, missing that they have two completely different functions: the first connector, usually with straight gate, must easily enter, exit and rotate in the spit, the second one must have a wide passage in order to easily insert the rope. Starting from these considerations, KONG has developed specific connectors for the different applications, creating the new ARGON quickdraws family.

Key Lock system on both connectors in order to avoid every possible catch. Perfect for those seeking the practicality of use.

ARGON SET 氩的超轻快挂

2个锁扣 2种功能

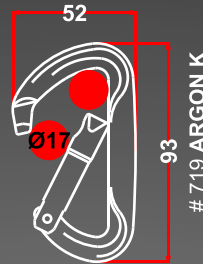

说到快挂，现在比较普遍趋势是的由两个完全相同的锁扣连接起来的组合，但是这种设计忽视了快挂的2个锁扣完全不同的功能。

第一个锁扣，一般是直门锁，设计的原则应是容易挂入、退出，且能够在岩钉，挂片中旋转的。

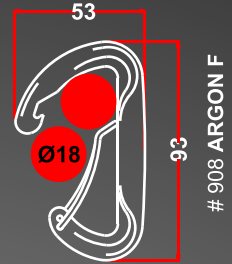

第二个锁扣则必须有较大的锁门以挂绳索。

基于以上考虑，KONG根据不同的应用设计出了特制的快挂——新型ARGON快挂系列。
