

DESCENDERS

FULL

A belay plate that can be used in many different conditions. It is a very useful device for rescue operations, the natural choice for mountain experts. It allows a cleaner belay point, avoiding tricky and cumbersome chains of carabiners and plates. The wide upper hole is able to accommodate two connectors for higher safety. When used as a descending device, it works with ropes from 8 to 12mm. Tested piece by piece.

Recommended for

Sport: Activities

Mountaineering, Snow & ice

Professional: Rescue activities

Mountain rescue, Tactical
