

QUICKDRAWS

ARGON MIX QUICKDRAW

QUICKDRAW FOR SPORT CLIMBING

The trend in recent years is to create sets consisting of two connectors with the same body forgetting that would perform very different functions together:

the first, usually straight gate, should easily enter, turn and be extracted from the anchor point, the second should allow the easy insertion of the rope.

KONG has therefore created specific connectors which combined with slings of suitable length and strength has given rise to the family of ARGON quickdraws.

The set ARGON MIX is the version that best embodies this new concept of quickdraw: the small connector with Keylock system prevents any snagging on the bolt while the larger connector with wire gate has a wider passage that facilitates the insertion of the rope.

The wire gate also provides a four-times longer lifetime than the normal connectors, reducing at the same time the weight. 13 mm Dyneema webbing available in various lengths (12, 16, 21, 26 cm).

The perfect compromise between lightness and functionality, easy and comfortable to handle, excellent handling of the lever.

COMPLETELY MADE IN ITALY.
