

WINCHES, POLES AND TRIPODS

GRIZZLY

NEW

KONG GRIZZLY, used as a component of a retrieval system, allows lifting and lowering of loads by positioning on the edge of a wall and avoiding the rubbing of the ropes against obstacles.

Thanks to the rotary movement of the structure, GRIZZLY makes easier the recovery of the load.

Fitted with reversible feet to ensure the perfect grip on the ground, either on slippery (clawed side) and on smooth surfaces (rubber side).

Easy to disassemble and transportable in the special shoulder bag.

High quality, completely made in Italy!
