SET PLE 04

ELEVATING PLATFORM FALL ARRESTERS

The boom of elevating work platforms, technically called PLE but better known as platforms or baskets, has introduced new working practices and new security issues.

For what concern the evaluation of the risks related to the working conditions of the operator on the PLE with articulated arm, Kong deals with issues arising from the upward projection (catapult effect), can be caused by stranding the basket, from any failure of the lift system or improper use. Kong offers some solutions to secure the operator by reducing most of the risks.

Features:

- adjustable static lanyard with integrated textile energy absorber
- wide range of adjustment
- the components can also be used in other work situations and replaced in case of wear
- quick adjustment of the length
- possibility of assembling connectors of different sizes according to the type of anchor point

Recommended for
