

ZAZA2 ADULTS

ZAZA2 CS

NEW

COUDOU PRO, the revolution of continuous lifelines for adventure parks!

HOW DOES IT WORK?

The principle of operation is very simple: the hook's opening is smaller than the diameter of the cable, but greater than the thickness of the plates. In this way, safety is guaranteed. Once you enter the lifeline, it is impossible to accidentally disconnect before the end of the course. Only by a special key supplied to the manager of the park, it is possible to unlock the sleeve and then make ultra-rapid evacuations in case of illness, storm, fire, etc...

Thanks to the various components, it is possible to secure all steps and the various games of your park, such as rope jumps, with the new ZAZA 2 Connect. Coudou Pro system will allow you to save on surveillance staff costs and ensure better security for your customers.

The only hook on the market equipped with an ultra fast evacuation system.

No maintenance, a simple mechanism and a very low price compared to traditional safety systems.

Best classification (class E PAH norms) for maximum safety that allows you to save money on insurance costs.

A real revolution, high quality, completely produced in Italy!

New version with removable cross bar.

Conform to the requirements of the norm EN 17109, it is suitable to create category E Individual Safety Systems.

629SET000KK: spare parts for hook ZAZA2 CS. The set includes bar, grain and threadlocker.
