

## ZAZA ACCESSORIES

### ZAZA DS

Special crimping ferrules for children's ropes courses.  
More compact, better fluidity. Speedy implementation,  
professional visual aspect.

COUDOU PRO, the revolution of continuous lifelines for  
adventure parks!

#### HOW DOES IT WORK?

The principle of operation is very simple: the hook's opening  
is smaller than the diameter of the cable, but greater than the  
thickness of the plates. In this way, safety is guaranteed. Once  
you enter the lifeline, it is impossible to accidentally  
disconnect before the end of the course. Only by a special key  
supplied to the manager of the park, it is possible to unlock  
the sleeve and then make ultra-rapid evacuations in case of  
illness, storm, fire, etc...

Thanks to the various components, it is possible to secure all  
steps and the various games of your park, such as rope  
jumps, with the new ZAZA 2 Connect. Coudou Pro system  
will allow you to save on surveillance staff costs and ensure  
better security for your customers.
