TARGET CANYON

PROFESSIONAL HARNESS FOR CANYONING

Canyoning harness that combines the comfort of a mountaineering harness with the abrasion-resistance and shape necessary for caving and canyoning.

Provided with a special front attachment point that can accommodate a quick link and allow a chest ascender to be connected in a lower position. During the ascent phase, you gain 10-15 cm more height for each push.

The quick link can also be used as an auxiliary attachment point, ideal for rescue maneuvers.

Frontal sling to attach the descender and avoid risk of loss. Equipped with two small lateral holes for attaching a lanyard and descender.

Two strong gear loops made of thin tape function smoothly with carabiners and reduce weight.

Extremely durable protective seat made of coated PVC is easily removable via Velcro for maintenance, cleaning and replacement.

Four rear slots to accommodate isolated material. These allow you to fully customize your equipment layout and facilitate identification.

Two reinforced rear slots to accommodate 2 reserve quick links that can be used as additional gear holders or to hang a small emergency bag (bolts, keys, medical kit...) during tricky exploration phases.

Successfully tested in the Himalaya in the highest canyon in the world.

Highest quality and attention to detail.

Manufactured in Italy, high quality and attention to details.
