NFC - STICKERS FOR METAL

NEW

Sticker with integrated NFC technology chip. It can be applied to any metal product.

50 pieces per packaging.

The application of this chip allows the unique digital identification of the product and offers the following advantages:

- the chip also bears the serial code, which may otherwise become unreadable in certain circumstances. The chip keeps its contents intact even after being subjected to very significant stress

- it enables quick readings of the unique code during all verification, inventory and maintenance steps, omitting the need to manually transcribe serial numbers. This, in addition to speeding up the process, drastically and reduces errors

- it enables the use of PPE Management software that simplifies, expedites and organizes the management, inspection and conservation of your PPE

Kong partners with Exteryo 4.0 and recommends the adoption of Exteryo Safety PPE management system 4.0. This partnership brings:

- the presence of a pre-installed NFC chip on many Kong PPE items

- the presence of all Kong product inspection information within the software
