

MASTER TEXT in English  
 1 - GENERAL INFORMATION  
 1.1) The information provided by the manufacturer (hereinafter information) must be read and well understood by the user before using the device.  
 1.2) All our devices are tested / checked piece by piece in accordance to the procedures of the Quality System certified according to the UNI EN ISO 9001 standard.  
 1.3) Personal protective equipment is certified by the notified body reported in the specific instructions of the device in accordance with Annex V of the Regulation (EU) 2016/425. If Category III PPE, they are subject to surveillance of production in accordance with Annex VIII of the Regulation (EU) 2016/425 by the notified body whose accreditation number is marked on the device.  
 1.4) Personal use of the device is recommended to monitor the degree of the device and to maintain it continuously.  
 1.5) Check that the device has been supplied intact, in the original packaging and with its information. For devices sold in different countries from the destination of origin, the distributor shall verify and supply the translation of this information.  
 1.6) This device can be used in combination with other devices when compatible with relevant manufacturer information.  
 1.7) Important  
 1.7.1) Avoid exposing the device to sources of heat and contact with substances chemical. Reduce direct exposure to the sun, in particular for textile and plastic devices. Low temperatures and humidity can facilitate the formation of ice, make it difficult to make connections, reduce flexibility, as well as increasing the risk of breakage, cutting and abrasion.  
 1.7.2) The position of the anchor is fundamental for arresting a fall safely: carefully assess the clearance under the user, the height of a potential fall, the stretch of the line/rope, the deployment of an eventual energy absorber, the height of the user, and the "pendulum" effect, in order to avoid any possible obstacle (eg the ground, the rubbing, abrasions, etc.).  
 1.7.3) The minimum strength of the anchor points shall be at least 12 kN, both made on natural and artificial elements. The evaluation of those made on natural elements (rock, plants, etc.) are only possible in an empirical way, so it shall be carried out by a trained and experienced person. For those made on elements artificial (metal, concrete, etc.), the evaluation can be carried out scientifically, therefore it shall be carried out by a trained and authorized person.

1.8) Warning  
 1.8.1) Prolonged suspension, especially if inert, can cause damage irreversible and even death.  
 1.8.2) It is absolutely forbidden to modify and / or repair the device, outside than what is prescribed in this information.  
 1.8.3) If the user has the slightest doubt about the efficiency of the device shall replace it immediately, particularly after using it to stop a fall.  
 1.8.4) This device shall only be used by users medically fit, trained (and educated) for use or under direct control of trainers / supervisors.  
 1.8.5) Rock and ice climbing, descents and abseils, the "via ferrata", speleology and caving, ski-mountaineering, canyoning, exploration, rescue, tree climbing and work at height are all high-risk activities that may involve even fatal accidents. The user assumes all risks arising from the practice of these activities and the use of all our devices.  
 1.8.6) Laboratory tests, checks, inspections, informants do not always succeed to reproduce the practice, so the results obtained in real life conditions of use of the device may sometimes differ significantly. The best indications are provided by the continuous use and practice under the supervision of competent / experienced / qualified persons.  
 1.8.7) This information concerns the description of the features, performances, assembly, disassembly, maintenance, conservation, disinfection, etc. of the device. Even if they contain some suggestions for use, should not be considered an operating manual in real situations (as well as a maintenance manual of a car does not teach driving and does not replace driving school).

2 - WORK AT HEIGHT  
 2.1) Additional information for individual fall protection systems in the context of work at height.  
 2.2) For safety purposes, in these systems is essential to:  
 - carry out risk assessment and ensure that the entire system, of which this device is only one part, is both reliable and safe;  
 - prepare a rescue plan to deal with any emergencies that could arise while using the device;  
 - position the anchor device or the anchor point as high as possible;  
 - minimize the height of potential falls;  
 - use devices that are suitable for the purpose and certified.  
 2.3) Important: in a fall arrest system it is mandatory to use a full body harness being the only device suitable for this use and this device must comply with current regulations.

3 - STORAGE AND MAINTENANCE  
 3.1) Store the device in a dry place (relative humidity 40-90%), fresh (temperature 5-30 ° C) and dark, chemically neutral (avoid absolutely saline and / or acid environments), away from sharp edges, corrosive substances or other possible prejudicial conditions.  
 3.2) Transport the device considering the precautions foreseen for storage and limit direct exposure to sunlight and moisture.  
 3.3) Maintain the device as follows:  
 - wash frequently with warm drinking water (30 ° C), possibly with the addition of a neutral detergent;  
 - rinse and leave to dry, avoiding spinning and direct exposure to the sun;  
 - only for metal components, lubricate the moving parts with silicone-based oil after drying, avoiding contact with textile parts.  
 3.4) If necessary, disinfect by soaking the device for an hour in warm water with sodium hypochlorite diluted 1% (bleach). Rinse thoroughly with drinking water, and, without spinning, leave to dry without exposure direct to the sun. Avoid autoclaving the textile devices.

4 - CONTROLS AND INSPECTIONS  
 4.1) User safety depends on continuous efficiency, integrity and strength of the device, which it is necessary to monitor through the controls and the prescribed inspections.  
 4.2) Before and after use the user must carry out all the checks described in specific information, and in particular make sure that the device is:  
 - in optimal conditions and that works properly;  
 - suitable for use in accordance with these instructions (any other use is considered non-compliant and therefore potentially dangerous).  
 4.3) Except for more restrictive legal requirements, inspections of Category III devices shall be carried out:  
 - at least every 12 months starting from the first use;  
 - the time interval between inspections can be reduced according to the type, the frequency and the environment of use;  
 - by a competent person (therefore formed and authorized by the manufacturer, eg a "KONG PPE Inspector") in strict compliance with the manufacturer's instructions.  
 4.4) The results of periodic inspections must be recorded on the form inspection of the device or on a designated register.

## SYMBOLS USED

- Correct use - Uso corretto - Utilisation correcte - Sachgemäßer Gebrauch - Uso correcto - Utilização correta
- Wrong use - Uso errato - Mauvaise utilisation - Unsachgemäßer bzw. falscher Gebrauch - Uso equivocado - Utilização incorreta
- Attention, not allowed - Attenzione, non consentito - Attention, non autorisé - Achtung, nicht erlaubt - Atención, no permitido - Atenção, não permitido
- Danger of death - Pericolo di morte - Danger de mort - Todesgefahr - Peligro de muerte - Perigo de morte
- Anchor point - Punto di ancoraggio - Point d'ancrage - Anschlagpunkt - Punto de anclaje - Ponto de ancoragem
- Manoeuvre with the need of manual control - Manovra con necessità di controllo manuale - Manoeuvre avec nécessité d'un contrôle manuelle - Manöver mit einer erforderlichen manuellen Kontrolle - Manobra con necesidad de control manual - Manobras com necessidade de controlo manual
- Attached person - Persona collegata - Personne rattachée - Verbundene Person - Persona enganchada - Pessoa ligada
- Load - Carico - Charge - Belastung - Carga - Carga

## MARKINGS

U1AA

Conformity to the relevant U1AA standard

EN 15151-2:12 TYPE 2

Conformity to EN15151-2:2012  
 European standard for manual breaking devices  
 Type 2 - For abseiling and belaying, without a function to adjust friction

1

Ø9+13

Suitable single rope diameter range in millimetre from 9mm to 13mm

1/2

Ø8+8,9

Suitable twin and half ropes diameter range in millimetre from 8mm to 8.9mm

Rope diameters stated by the manufacturer have a tolerance up to ± 0.2mm.  
 Rope diameters and other characteristics may vary with use (sheath surface, elasticity...).

Proper rope winding
