

MASTER TEXT IN English
1 - GENERAL INFORMATION
 1.1) The information provided by the manufacturer (hereinafter information) must be read and well understood by the user before using the device.
 1.2) All our devices are tested / checked piece by piece in accordance to the procedures of the Quality System certified according to the UNI EN ISO 9001 standard.
 1.3) Personal protective equipment is certified by the notified body reported in the specific instructions of the device in accordance with Annex V of the Regulation (EU) 2016/425. If Category III PPE, they are subject to surveillance of production in accordance with Annex VIII of the Regulation (EU) 2016/425 by the notified body whose accreditation number is marked on the device.
 1.4) Personal use of the device is recommended to monitor the degree of the device and to maintain it continuously.
 1.5) Check that the device has been supplied intact, in the original packaging and with its information. For devices sold in different countries from the destination of origin, the distributor shall verify and supply the translation of this information.
 1.6) This device can be used in combination with other devices when compatible with relevant manufacturer information.
 1.7) Important:
 1.7.1) Avoid exposing the device to sources of heat and contact with substances chemical. Reduce direct exposure to the sun, in particular for textile and plastic devices. Low temperatures and humidity can facilitate the formation of ice, make it difficult to make connections, reduce flexibility, as well as increasing the risk of damage, cutting and abrasion.
 1.7.2) The use of the device is fundamental for ensuring a fall safely: carefully assess the clearance under the user, the height of a potential fall, the stretch of the device, the deployment of an event energy absorber, the height of the user, and the "pendulum" effect, in order to avoid any possible obstacle (eg the ground, the rubbing, abrasions, etc.).
 1.7.3) The minimum strength of the anchor points shall be at least 12 kN, both made on natural and artificial elements. The evaluation of those made on natural elements (rock, plants, etc.) are only possible in an empirical way, so it shall be carried out by a trained and experienced person. For those made on elements artificial (metal, concrete, etc.), the evaluation can be carried out scientifically, therefore it shall be carried out by a trained and authorized person.
 1.8) Warning
 1.8.1) Prohibited suspension, especially if inert, can cause damage irreversible and even death.
 1.8.2) The user has the slightest doubt about the efficiency of the device shall replace it immediately, particularly after using it to stop a fall.
 1.8.3) This device shall only be used by users medically fit, trained (and educated) for use or under direct control of trainers / supervisors.
 1.8.4) Rock and ice climbing, descents and abseils, the "via ferrata", speleology and caving, ski-mountaineering, canyoning, exploration, rescue, tree climbing and work at height are all high-risk activities that may involve even fatal accidents. The user assumes all risks arising from the practice of these activities and the use of all our devices.
 1.8.6) Laboratory tests, checks, inspections, information and standards do not always succeed to reproduce the practice, so the results obtained in real life conditions of use of the device may sometimes differ significantly. The best indications are provided by the continuous use and practice under the supervision of competent / experienced / qualified persons.
 1.8.7) The user concerns the description of the features, performances, assembly, disassembly, maintenance, conservation, disinfection, etc. of the device. Even if they contain some suggestions for use, should not be considered an operating manual in real situations (as well as a maintenance manual of a car does not teach driving and does not replace driving school).
2 - WORK AT HEIGHT
 2.1) Additional information for individual fall protection systems in the context of work at height.
 2.2) For safety purposes, in these systems is essential to:
 - carry out risk assessment and ensure that the entire system, of which this device is only one part, is both reliable and safe;
 - prepare a rescue plan to deal with any emergencies that could arise while using the device;
 - position the anchor device or the anchor point as high as possible;
 - use equipment that is suitable for the purpose and certified.
 2.3) Important: In a fall arrest system it is mandatory to use a full body harness being the only device suitable for this use and this device must comply with current regulations.
3 - STORAGE AND MAINTENANCE
 3.1) Store the device in a dry place (relative humidity 40-90%), fresh (temperature 5-30 ° C) and dark, chemically neutral (avoid absolutely saline and / or acid environments), away from sharp edges, corrosive substances or other possible prejudicial conditions.
 3.3) Transport the device considering the precautions foreseen for storage and limit direct exposure to sunlight and moisture.
 3.3) Maintain the device as follows:
 - wash the device in warm water (30 ° C) possibly with the addition of a neutral detergent;
 - rinse and leave to dry, avoiding spinning and direct exposure to the sun;
 - only for metal components, lubricate the moving parts with silicone-based oil after drying, avoiding contact with textile parts.
 3.4) If necessary, disinfect by soaking the device for an hour in warm water with sodium hypochlorite diluted 1% (bleach). Rinse thoroughly with drinking water, and, without spinning, leave to dry without exposure direct to the sun. Avoid autoclaving the textile devices.
4 - CONTROLS AND INSPECTIONS
 4.1) User safety depends on continuous efficiency, integrity and strength of the device, which is necessary to monitor through the controls and the prescribed inspections.
 4.2) Before and after use the user must carry out all the checks described in specific information, and in particular make sure that the device is:
 - in good condition and that its performance is properly;
 - suitable for use in accordance with these instructions (any other use is considered non-compliant and therefore potentially dangerous).
 4.3) Except for more restrictive legal requirements, inspections of Category III devices shall be carried out:
 - at least every 12 months starting from the first use;
 - the time interval between inspections can be reduced according to the type, the frequency and the environment of use;
 - by a competent person (therefore formed and authorized by the manufacturer, eg a "KONG PPE Inspector") in strict compliance with the manufacturer's instructions.
 4.4) The results of periodic inspections must be recorded on the form inspection of the device or on a designated register.
5 - DEVICE LIFE
 5.1) The life of the metal components is indefinite, theoretically unlimited, while those affected by aging report the expiration date over which the device shall be replaced. This provided that:
 - the device was not used to stop a fall;
 - the methods of use comply with the information in this information;
 - storage and maintenance are carried out as described in point 3;
 - the results of pre-use and post-use controls are positive;
 - the results of periodic inspections are positive;
 - the device is used correctly not exceeding the marked MBS of 1/4 for metal devices or of 1/10 polymer/mixed devices.
 5.2) Discard the devices used to stop a fall or which have not passed pre-use or post-use controls, or periodic inspections.
 5.3) Improper use, deformations, falls, wear, chemical contamination, exposure to temperatures below -30 ° C, or above + 50 ° C for textile/plastic parts/devices and + 120 ° C (eg autoclave) for metal devices, are some examples of other causes that can reduce, limit and terminate the life of the device.

NOMENCLATURE

EN: (A) Belt, (B) Thigh loops, (C) Carabiner, (D) Back loop, (E) Chest loops.
 Main metal materials: Aluminum alloy and galvanized steel.
 Main textile materials: PolyAmide and Polyester.

IT: (A) Cintura, (B) cosciali, (C) moschettoni, (D) anello posteriore, (E) Passanti per il petto.
 Materiali metallici principali: Lega di alluminio e acciaio galvanizzato.
 Materiali tessili principali: PolyAmide e Poliestere.

FR: (A) Ceinture, (B) Passants de cuisse, (C) Mosqueton, (D) Boucle dorsale, (E) Passants de poitrine.
 Principaux matériaux métalliques : Alliage d'aluminium et acier galvanisé.
 Principaux matériaux textiles : PolyAmide et Polyester.

DE: (A) Gürel, (B) Oberschenkelschlaufen, (C) Karabiner, (D) Rückenschlaufe, (E) Brustschlaufen.
 Wichtigste Metallmaterialien: Aluminiumlegierung und verzinkter Stahl.
 Wichtigste Textilmaterialien: Polyamid und Polyester.

ES: (A) Cinturón, (B) Trabillas de muslo, (C) Mosquetón, (D) Trabilla de espalda, (E) Trabillas de pecho.
 Principales materiales metálicos: Aleación de aluminio y acero galvanizado.
 Principales materiales textiles: Poliamida y poliéster.

PT: (A) Cinto, (B) Anel das coxas, (C) Mosquetão, (D) Anel traseiro, (E) Anel do tórax.
 Principais materiais metálicos: Liga de alumínio e aço galvanizado.
 Principais materiais textuais: Poliamida e Poliéster.

FULL BODY HARNESS
Use as Full Body Harness, Compliance with European standard

EN361:2002 - Full Body Harness for fall protection systems

EN12277:2012+A1:2018 type A - Full Body Harness for mountaineering including climbing

EN813:2008 - Sit harness for fall protection/prevention systems

EN12277:2012+A1:2018 type C - Full Body Harness for mountaineering including climbing

EN358:2018 - Work positioning belt

EN 361:02

EN 12277:15+A1:18/A

Uso come imbracatura per il corpo intero, conformità con lo standard europeo

EN361:2002 - Imbracatura completa per sistemi di protezione anticauta

EN12277:2012+A1:2018 tipo A - Imbracatura completa per i'alpinismo compresa i'arrampicata

EN813:2008 - Imbracatura da sedere per sistemi di protezione/ prevenzione delle cadute

EN12277:2012+A1:2018 tipo C - Imbracatura completa per i'alpinismo compresa i'escalade

EN358:2018 - Cintura di posizionamento sul lavoro

Utilisation comme harnais complet, conformité à la norme européenne

EN361:2002 - Harnais complet pour systèmes de protection contre les chutes

EN12277:2012+A1:2018 type A - Harnais complet pour i'alpinisme et i'escalade

EN813:2008 - Harnais cuissant pour systèmes de protection/ prévention des chutes

EN12277:2012+A1:2018 type C - Harnais complet pour i'alpinisme, y compris i'escalade

EN358:2018 - Ceinture de maintien au travail

Verwendung als Auffangurt für den ganzen Körper, Übereinstimmung mit der europäischen Norm

EN361:2002 - Auffanggurte für Absturzsicherungssysteme

EN12277:2012+A1:2018 Typ A - Auffanggurte für den Bergsport einschließlich Klettern

EN813:2008 - Sitzgurt für Absturzsicherungs- und -vermeidungsysteme

EN12277:2012+A1:2018 Typ C - Auffanggurte für Bergsteigen und Klettern

EN358:2018 - Arbeitspositionierungsgurt

Utilización como arnés de cuerpo entero, cumplimiento de la norma europea

EN361:2002 - Arnés de cuerpo entero para sistemas de protección contra caídas

EN12277:2012+A1:2018 tipo A - Arnés de cuerpo entero para montañismo incluyendo escalada

EN813:2008 - Arnés de asiento para sistemas de protección/ prevención de caídas

EN12277:2012+A1:2018 tipo C - Arnés de cuerpo entero para montañismo incluyendo escalada

EN358:2018 - Cinturón de posicionamiento en el trabajo

Utilização como arnés de corpo inteiro, em conformidade com a norma europeia.

EN361:2002 - Arnés de corpo inteiro para sistemas de protecção contra quedas

EN12277:2012+A1:2018 tipo A - Arnés de corpo inteiro para alpinismo, incluindo escalada

EN813:2008 - Arnés de segurança para sistemas de protecção/prevenção de quedas

EN12277:2012+A1:2018 tipo C - Arnés de corpo inteiro para alpinismo, incluindo escalada

EN358:2018 - Cinto de posicionamento de trabalho
